| <p>Note: The PMI has a possible range from zero to 100. Readings above 50 generally indicate expansion in Houston's goods-producing sectors while readings below 50 signal contraction. The PMI needs to drop below 45, however, before it signals contraction in the overall Houston economy.</p> <p>The Houston and U.S. Purchasing Managers Indexes are conceptually similar but not identical.</p> <p>Source: Institute for Supply Management-Houston</p> | | |
